

With a subscription to Apex Trajectory Cloud™ Enterprise Software Service you can track, manage, control, monitor and analyse your real-time supply, materials and equipment. Trajectory Cloud makes it **Easy** to manage your supply chain and administer from your desktop, laptop, or any mobile device or browser anywhere, anytime, 24/7. No software to install, nothing for your IT department to support. It's a robust, secure Cloud solution.

The Trajectory Cloud automates the flow of replenishment information to your storeroom or external suppliers. Schedule reports or view on-demand, real-time information sorted and sub-totaled the way you want to see it. A powerful system of notifications and alerts lets you or anyone else you designate be aware when stock gets low, usage patterns change, items are not returned on time, or any other critical events you define occur. Trajectory Cloud makes it that **Easy!**

Data flows seamlessly from all Apex Connect n' Go™ devices and spaces through the Trajectory Cloud by Ethernet or wireless connection via the Internet.

Connect n' Go™

All Apex devices are easy-to-use Internet appliances (Windows-Free). They're powered by Apex Connect n' Go Technology. No servers to install, nothing for your IT department to support. Simply plug the device into a power supply, connect to the Internet (Ethernet or wireless) and you're ready to go. It's that **Easy!**

Trajectory Cloud makes it easy to manage your supply chain and administer from your desktop, laptop or any mobile device or browser anywhere, anytime, 24/7. It's that **easy!**

Trajectory Exchange<sup>SM</sup>

---

Trajectory Exchange<sup>SM</sup> allows you to import and export data on-demand and connect with your existing systems (ERP, POS, CMMS, MES, etc.) in many ways. Trajectory Exchange offers the following standard capabilities:

1. Import/Export user information within the Profile Manager of Trajectory Cloud
2. Import/Export product information within the Product Manager of Trajectory Cloud
3. Export transaction data, usage data and device log data within the Report Manager of Trajectory Cloud

With just a few clicks of a mouse, you can set up a job online to export the data you want at any frequency and schedule you define. No big projects or special programming are required for standard Trajectory data exchange. The reports can be exported as an Excel file, XML or CSV (Comma Separated Value).

### Trajectory Web Services<sup>SM\*</sup>

---

Trajectory Web Services<sup>SM</sup> expands the data Trajectory Exchange capabilities between your existing systems and the Trajectory Cloud. Trajectory Web Services provides import services and transaction data export services using standard Web Services specifications.

Trajectory Web Services enables the seamless flow of data from Trajectory Cloud to and from your back-end operating systems like ERP, POS, and other in-house applications. Easy-to-use instructions and worksheets are available for setting up data orchestrations.

If your organisation requires a highly customized, deep integration with Trajectory Cloud, we can create a tailored solution to automate the flow of data between your Data Centre and Trajectory Cloud. There are many options available to deploy your integration. Apex can customise a solution to meet your specific data exchange needs. It's that **Easy!**

\*Trajectory Web Services is an optional subscription service.
